BACK PAGE Hamburg scholar goes to bat for a duck called Donald

Where is Duckburgh, the home lown just after Easter with the aim of "insinialn-of Donald Duck, Huey, Dewey and ing, furthering and promoting Donald's Loucy, Unco Scrooge and a host of wellknown Walt Dianey cartoon characters? You may not have given the subject much Hought recently, but others have,

Doneld Duck is not only popular with children all over the world, he is also a cult hero with the New Left.

Pal Jensen, e Norwegian student of the Duck clen, reckons Duckburgh is on the US West Coast, Another school of thought claims It is on the Eastern seaboard, whera the Mayflower londed.

Hans von Storch, a 27-year-old melhematician from Grosshansdorf, near Hainburg, reckona to hove solved this particular teaser once and for oll.

Unce Scroogc'a houseboat is moored on the Ohlo 2,400 miles away, which Hans von Storch estimutes to be exactly 1,056 kilometres, assuming o Duck mile to be one thousand paces at 44 centimetres a lime.

The Hamburg Duck scholar has checked the climate and other criteria of localitics this distance from the Ohio ond coneludes that Duckburgh must be on the Atlantic coast roughly on a level with Waahington D.C.

Hans von Storeli moy only be a Donald Duck scholar in his spare time but he docs edit o mimeographed magazine enlitled Der Hamburger Donaldist, circulation

He is also o founder member of a Do-

ing, furthering and promoting Donald's ideals along sacrosanet non-commercial lines."

Ha ond about thirty friends share a slightly offbeat hobby and elthough they retain a sense of humour they are dedicated Donald Duck scholars to e man.

For some tlina they have devoted conalderable thought and painstaking research into the reason why Huey, Dewey and Louey live with their Uncle Donald rather than with their mother.

From various carefully annotated references Hans von Storch deduces that their mother departed from the straight and narrow and sent the trio to Uncle Donald not long after their birth.

llney, Dewey and Louey soon realised thal Donald is not the world'a best parent and guordian and learnt how to cope with the world by virtue of their own acumen and what they were taught in their scout

Donald Duck acholars are also keenly Interested in Scrooge McDuck, Donold'a fabulously rich uncle who lives in continual fear of being cleaned out by o gang of safc-crackers.

Heinz Boldl, a Düsseldorf Duck scholar. has caculated that Unca Scrooge Is worth 23.79 trilllon deutschmarks.

Unca Scrooge, or Onkel Dagobert in German (not to mention Tlo Pathinas In Argentina, One' Piscou in France, Cika Beja in Yugoslovia or Onkel Joakim in Denmark) evidently regards Donald end

his three newphews as his heirs. This, or so Scrooge McDuck argues, entitles himto use either Donald or all four of them as cheap or unpaid labour, aince the Duck fortune will be theirs one of these daya. Hney, Dewey and Louey (or Tick, Trick ond Track in Germon) prove invaluable in putting e spoke in the wheel of the safecrackers' plans. Will it all be worth their while? The Hamburg Duck

wonder, scholars They ore currently engaged in a research project designed to ascertain whether Duckburgh'a laws of Inheritance entitle uncles to bequeath everything to thair nephcws. "A tricky problam," aays Hans von Storch, furrowing his brow in npproved legal fashion.

Research is also conducted into other Duckburgh characters - Daisy, for Instonce. It may be a zany hobby, but you get to know ao many nice folk, Hans von Storch explains,

la Daisy emencipated? She lives on her own and certainly gets her own way with the menfolk, What about Donald's cousin Gustav Gans with his proverbial good luck? Rumour has it that Cousin Gustav is a laient homosexual.

Most of the characters thet delight readers of Donald Duck comics were thought up by Carl Barks, o US cartoonist who was associated with Duckburgh from 1942 to 1968.

. Barks, his Hamburg fens cielm, is that

Hens von Storch with Donald and Unca Sarooge (Photo: Conting classic illustrator of the Duckburgh wid life. Artists who have taken his place faib

attain his pinnacle of achievement. Yet even in Hamburg two schoold thought have evolved, the classicists the limit themselves atrictly to bone fit source material and the left-wingers, lets say, who take a wider view of Donald Dat and his environment.

The left-wingers have already sdopts' current left-wing alogans in this county such as "No to nuclear power staliants Duckburgh!"

Both factions are agreed, however, the attempts to commercialise the study a Donald Duck and Co. are despicable.

"I feel it is a disgrace that good tales it inisused for commercial ends," says lim von Storch. "We are implacably opposed to all attempts to vulgarise our pure-stthe-driven-snow rescarch work or to misuse it for profit-making ends."

Backing for nuclear option at London talks

L tional employment policy," Boun Finance Minister Hans Apel noted at one stage of the London summit.

He not only hil the neil on the head where the current differences in cconomic situation of Western countries are concerned; he also implicitly called into question the holding of summit meetings of this kind of all.

What more can the licads of government of the seven leading industrialised countries of the West do than promise cach other to put their own houses in order with due regard for the problems of others?

This was bound to be all they accomplished in London, just as they were able to do little more at Rambouillet and Pucrto Rico.

The London summit, however, differed from its predecessors in two respects that were particularly important from this country's point of view.

Choncellor Schmidt mct President Carter for the first time since his inanguration and the ogende included, for the first time, exports of nuclear techno-Intelligence of the second state of the

logy, which are a bone of contention in respect of energy, amaments and economic policy in general.

There was no breakthrough. The prospects of this country's nuclear industry remain uncertain for the time belng. · ·

Nuclear export business mean not only jobs. Nuclear power stations are a typical export sector for modern industrialised countries which will increasingly have to dispense with less sophisticated industrial exports if devalopment ald is to prove effective in the long term;

With the countries concomed agreelag-only to differ, a working party is lo be set up to consider the problem. Its briaf is to review the possibilities of furllicr worldwide exploitation of atomic energy without heightening the danger of nuclear power being misused for miitary purposes.

This country was at pains to stress that neither the London summit nor the report of the working party must present

There is no such thing as an interna- countries not represented at the Western economic summit, but with nuclear export interests of their own with a fait accompli.

It remains to be seen whether Bonu's view will gain accaptance. The London summit mercly agreed that atomic energy must, in principle, be utilised. Whether or not it may be exported is another matter.

Even if fuel supplies for nuclear power stations already delivered ore assured without further discrimination, the wording of such agreement as was reached at London remoins compatible with the US view that there should be a ban on the export of sensitive equipment

The Loudon agreement will, on the other hand, prove a shot in the arm for the domestic nuclear debate. All concerned were agreed that the nuclear option must be laken.

What is more, Lower Saxony Premier Ernst Albrecht will not be able to play for time any longer in respect of proposals to set up a reprocessing plant for nuclear fuel and radioactive waste disposal facility in his state.

Herr Albrecht has argued in Hanorer that the United States may agree to provide a final resting-place for radioactive waste. President Carter firmly quashed any such idea in London. The London summit likewise per-

formed a useful function inasmuch as Gatt talks too will be given a fresh lease President Jimmy Carter met the other

All these senior statesmen have been a great help lo me," President Carter is on record as having said with a grin. The London summit in many respects revolved around two questions: how is international economic recovery to be brought about and who holds that

'It goes without saying that this country is felt first and foremost to hold the key, and President Carter's reference to "senior statesmen" was doubtless mainly, and indecd rightly, made with Helmut Schmidt in mind.

The Bonn dalegation did its best to maintain a low profile, but pressure wea unmistakeeble even before the aummit began. Between them the industrialised countries have fifteen million unemployed, not to mantion two-figure inflation rates in many countries and social and political unrest.

. In their midst this country, a relative newconier to the upper cchelons of world affairs, is well-heelad and boasts an inflation rate of a mere four per cent or so.

Countrics auch es Italy, Britain and France brought, considerable, behind-lhcscencs pressures lo beer to induce Bonn to reflote just a little faster with a view. to short term growth.

Both governments and the media in

leaders for the

first time and will now no doubt be tempted to formulate a: new non-proliferation policy. In other respects time will tell whether the London summit has been a success. Much will depend the progress on made towards a solution of the North-South clash, with lic Paris talks on international economic cooperation also have proved a Vence

guns of protectionsim. But doubts arose even while the summit was in session. Mention was made of ailing key in-

dustries, such as steel and shipbuilding. and there was talk of exceptions to free trade, with concepts such as libéralisme organist and controlled competition being aired.

In conjunction will the undertaking forgo protectionism the new IMF 10 credit facilities may have laid the groundwork for an uninterrupted international economic recovery. Maybe the of life.

due for resumption President Jimmy Certer with Chencellor Helmut Schmidt at the at the cud of May, London economic summit. In the beckground Foreign Minister The summit will Hans-Dlatrich Genschor talks with US State Secretary Cyrus

success if it turns out to have spiked the As for this country, it remains to be seen whether it will be allowed to proceed serencly towards its target of a fiveper-cent growth rate this year or whether other Western countries will intervene to urge Bonn to pult the stops out, as Hans Apel put It.

For the tline being Dr Apel sees no need to go all out for reflation, but Britain in particular is so emphatic about the obligations it feels are incumbent on countries with export surpluses that agreement at London may yet prove to have been little more than a full before Eberhard Wisdorff the slorm. (Handelsblall, 9 May 1977)

accusation was not reiterated et the ondon summit

Budget deficits have been run up, so have imports. Surpluses ore on the decline once invisibles ere taken into eccount. The floating deutschmark has steadily been revelued. Bonn is ploughing 16,000 million deutschmarks into economic investment. Alling economies have bean given a shot in the ann in the form of loans and monetary support measures.

All these measures, Herr Schmidt pointed out, ere steps in the right direc-tion, helping deficit countries to get their economies back on an even keel.

Behind the scenes, govennment officials had obviously been beavering away at the particular problem, so it was not of the London g the lessons Mr Carter reckoned to have learnt proving a stabilising fector,

. The sevon Western leaders were not expected to draft on impressive programme to combat, unemployment. There would have been little point in an ettempt, since each and every country lias problams of its own end ways lund means of dealing with them. But a great ideal may hove been gained by establishing and meintaining contact batween them, thereby fostoring confidance. Peter Gillies

(Dis, Well. 9 May 1977)

on Bonn to boost

their respective countries took good care to spell out the message in no uncertain

Weatern leaders pointed out in Down-ing Street: that life is hard back home, and some of them were able to refer to Communist pressure, but neither M. Glscard d'Estaing nor Signor Andreottiwent so far as to urge Harr Schmidt to: reflate regardless.

Holnut Schmidt and Hans Apel cloimed that this country is keenly intcrested in growth end full employment bolk nationally, and Internationolly, but not at the price of higher inflation.

In the medium term, they explained. higher inflation leads to unamployment, which is what raflation is intended to combat in the short term.

The Chencellor went to great lengths to refute allegations that this country is not doing enough to speed the pace of international economic recovery. This

Wrangle over troop strengths between Nato delegates in Vienna noi at make this point; they also note that is bloc border guards and security for who are ormed forces in oil but Im East and West in Vienna ought then to be included in the ckage. East bloc delegates have since shy

A t 11 a.m. on 15 April a moment of truth descended on the totest round of MBFR troop cut talks in Vienna, which have probably been the most fruitless East-West taiks in the history of detente to date.

FOREIGN AFFAIRS

in the Baroque conference hall at the itofburg, tha Habsburg Imperial paiace in Vlenna, Nikolai Terassov es head of the Sovict delegation called on tha West to abandon its arbitrary estimates of East bloc troop strength in Poland, tha GDR ond Czechoslovakia.

it was high time, he claimed, that the West conceded that troop strengths were roughly equal on both sides. Troop cuts must thus be equal so as to ensure thet neither side sustoins any loss of security oud to ensure the implementation of nitifary detente as a acquel to politicai detente in Europe.

There could be little doubt about the objective of this conference table move, Eastern European governments are anxious to avoid joint probes of the glaring discrepancy between the troop strengths to which they admit and the Eastern bloo supremacy in Central Europe that Wesicm 'intetligence agencies allege to exist. "

Should the need ortse, the East bloc will doubtless try to inslauate that Noto has both got its figures wrong and vastly exaggerated lhc true state of affairs, the alm being to sow doubts as to the rellability of Nato troop strength figures.

The East bloc is also keen to fuel tho fires of impatience among people in the West who feel the protracted MBFR talks have been going on for far too tong ond would be prepared to settle for symbolic troop cuta on both sides for detente's sake so that a mutual balanced force reduction agreement is finally concluded.

On to June 1976 Soviet chief delcgate Oleg Khlestov atated on behalf of the East bloc countries that the Warsaw Psct had 987,300 men under orma stationed in Poland, the GDR and Czechoslovakia.

Troop strength, he claimed, totalled 805,000, plus air force manpower total]ing 182,000. Nato estimates arrived at an entirely different figure: 1,163,000 men, including 962,000 soldiers and 201,000 airmen.

Air force monpower estimates do not differ to any great extent. Nineteen thousand men may not be neither here nor there, but they hardly constitute a aubstantial discrepancy and Nato does not, in any case, propose to include air forces in the troop cut provisions.

All Nato has in mind where air forces are concerned is to propose a manpower freeze at present levels, with an upper limit of 200,000 mcn on cither side.

Land forces in Central Europe are the reat bone of contention, with the Warming to hove 805,000 men stationed in its sector of the area in which troop cuts are: envisaged, while the West estimates East bloc troop strength in Poland, the GDR and Cze4 choslovokia at 962.000.

Q

The difference of 167,000 men amounts to fifteen per cent of the total, or almost exoctly what the East bloc has in mind by way of troop cuts (since 1973 the Warsaw Pact has proposed across-the-board troop cuta ranging between thirteen ond seventeen per cent).

These figures are, of course, a year old. At the latest count the discrepency between Eastern claims and Western estimates amounts to roughly 171,000 men. t his would

Since 1973 Nato has upgradad from 777,000 to 791,000 Its estimate of Western land forces monpower in the Federal Republic of Germany, West Berlin and Benetux.

During the same period, however, Western estimates of East bloc troop strength in its sector of Central Europe have been revlaed from 925,000 to 962,000.

In other words, while the two sides have been negotiating in Vienna the East bloc, which clready has the larger number of troops stationed in the area, has quietly increased its troop sirength by 23,000.

What is more, the number of East bloc tanks has increased since 1970 by at least 2,000 to between 11,500 and 12,000. Since the talks began in Vienna, East bloc auperiority in tanks in Central Europe has increased in ratio from two and a half to three to one.

Yet Nato has done no more than to raise the issue, of tank, superiority; it does not insist on o reduction to equal numbers. And in order not to prejudica still further the MBFR talks' prospects

O stpolitik ond economic ties between this country and the East bloc was tho subject of a recent congress in Bonn held by the Eastern European Studies Association.

in the political sector relationa have chilled perceptibly of late, the experts noted. East bloc attempts to make furthey ingoads into the Four-Power status of Berlin, the imposition of a road toll on Western visitors to East Berlin and the exputsion from the GDR of Lothar Loswe, Federal Republic TV correspondent in East Berlin, are all regarded as symptomatic of the current trend.

Other East bloc countries are alao keeping their distance from Bonn. Mr Brezhnev's forthcoming visit to Bonn now scemar an altogether more distant prospect.

Czech leader Guatav Husak's longoverdue visit to this country has, it appears, been postponed, and the Rumaniaha have intimated that they are no longer prepared to ignore on occasion the Soviet claim that West Berlin la a third Germon political entity,

in recent months the Sovlet Union has evidently brought pressure to bear on its satellites to toe the line.

The Kremlin in particular takes great pains to blame this country for the deterioration in relationa. Bonn of course, especially Poreign Minister Genscher, has endeavoured hard to clarify this country's views on Ostpolitik in general ond Berlin in particular,

Growing Western interest in civil righta movements within the East bloc has undoubtedly played a leading tole in of auccess the West has also obondoned its originat objective of including Hungary in the troop cut zone.

Hungarian and Soviet troops are sta-tioned in Hungary. Their equipment includes roughly 3,000 tanks.

The West is content to make do with one-off withdrawal of 1,700 Soviet tanks in the form of five tank divisions and 68,000 men from the GDR. fn theory these tanks and other equipmentare then to be mothballed.

"So the clash over figures at Vienna la anything but the halrsplitting egainst which this country'a Helmut Schmidt wanted when he was Defence Minister. ...

What is at stake is the initial troop strength Nato eims to transform into an approximate balonce. The East bloc too is tolking in terms of balance end thas done ao since Mr Brezhney's East Berlin speech of 29 June 1976, the difference however being that. Moscow feela this opproximote balence already exists.

Since the beginning of 1976 East blog delegates have been at pains to point out that tens of thousands of civilian personnel back up Nato forces, whereas men in uniform carry out their duties in the Worsaw Pact.

The next step would logically be to assert that with the ioclusion of civilian personnel Nato manpower stands at a higher level than that of the Warsaw Pact, although East bloo delegates hava yet to go this far. Alternatively it could be argued that troop strengths might be roughly equal if anpport personnel were included; but

Progress only on economic front with East bloc

the detenoration of East-West ties, although Bonn has played its cards close to the chest on this topic.

It was further noted at the Bonn confcrence that the repatriation of German nationals from the Soviet Union has proceeded at a snail's pace. Last year only 9,000 people were granted exit permits to atart a new life in the Federal

Regular reports of demonstrations by German nationala in the Soviet Union or of harassment of ethnic Germans in Rumania who have applied to migrate to this country indicate how unsatisfectory the aituation remains despite the Helainki occords.

tt was conceded, however, that economic ties between the Federal Republic ond most East bloc countries made encouraging progress last year despite the overall recession.

East bloc countries are clearly keen to step up exports to this country in order gradually to reduce their trading deficits with Bonn.

Where most East bloc countries are concerned the Federal Republic remeins their major trading partner in the West: The East bloc is currently in debt to this country to the tune of roughly 11,000

PEOPLE Ludwig Erhard, father of the 'economic miracle', dies at 80

It would be impossible to write o his-Ltory of post-war Germany without mentioning Ludwig Erhard who dled In Bonn, aged 80, in the night from 4 to 5 May.

Long before Konrad Adenouer, the first Chancellor of the Federal Republic of Germany, assumed office, Ludwig Erhard had already charted the course that was to lead this country to unprecedented prosperity - a prosperity that was set in train by the 1948 currency reform which he masterminded.

It is a quirk and on irony of this man's political career that he who had dono away with the paralysing planned cconomy by a stroke of his pen and against the advice of experts and the wishes of the victors of World Wer tl should have foundered as a Chancellor on the cconomic crisis of 1966.

The stout, clgar-smoking politician who exuded so much optimism was brought to fall by the misconception that n courageous economic policymaker must of necessity also be a good head of government and that a successful professor of coonomics must automatically also be in a position to reconcite opposing - political interests - and - to tead a country with a firm hand.

Konrad Adenaucr, whose unwavering ties with the West and Nato would never have been possible without the economic success of his Minister of Economic Affairs, cannot be blamed for the failure as a Chanceltor of the father of the Wirtschaftswunder since Adenauer never wanted him to become his SUCCESSOT.

On the contrary, Adenauer did everything in his power to bar Erhard from the Chancellery.

He spared his faithful follower no humiliation whatsoever and sat with a stony face in the Bundestag, when Erhard, under pressure from his party friends, announced bis resignation os Chancellor. It was Erhord's tragedy that he never quite managed to step out of Adenauer'a shadow.

Ludwig Erhard owes the fact that he became the father of the Germon Wirtschaftswinder to a mistake on the part of his predecessor - ond that had nothing to do with Adenauer.

The Administration of the so-called bizone (the combined American and British Occupation zones) was the precursor of the Federal Ropublic of Garmany. It operated under the jurisdictionof the Military Government ond the German quosi-ministers called them-" scives "Directors".

The "Director of Economic Administration 'of the United Economic Areo", residing in Frankfurt, wos at the beginning of 1948 Johannes Semler. Outraged over the fact that the Americans provided only malze os o bread-making materi-' ol for the starving Germans, he protestcd at the and of January 1948 - In his: famous "chickenfeed" speech - against such a treatment of the vanquished . . . a World War It, to unburden himself, of

grata with the Americans and cost him hia office.

Proposed by the Free Democrats, Ludwig Erhard was elected Semiler's successor on 2 March 1948. In his very first speech in this capacity, Erhard announced that he wanted to do away with the controlled economy even before monetary reform because he did not belleve in "total control".

Ludwig Erhard's great moment came on 20 June 1948 when the victors declared the worthless Reichsmark no longer legal tender.

This currency reform was tantamount to a dispossession of the nation's savers while favouring owners of materiai goods, who promptly put their titherto withheld wares on the market following Ludwig Erhord's laconic announcement over radio in which he said: "As of today the only ration ticket is the deutschmark.

General Lucius D. Cloy, the virtually oinnipotent head of the US Military Goveniment, did not just accept this insubordination on the part of the "Director for the Economy", but demanded obcdicace because It was not in the purview of the German Administration to change the Military Government's ratioting regulations without authority.

Erhard replied:"t haven't changed the regulations; I declared them null and voi 1

Both the Christian Democrata and the Free Democrats vied for this valiant man. In February 1949, Erhard met the largely still unknown Konrad Adenauer who persuded him to join the CDU and

Only a year ago, Hans Katzer, 58, drew attention to one of the inalienable and fundamental tenets of the Social Affairs Committees of Christian Democratic Employeea (CDA) by saying "Man is more important than the cause - o quototion from the so-called Offenburg Statement of 1967.

Herr Katzer, CDU Deputy Floor Leader, has been chairman of the CDA alnce 1963 and not until now has he had a serious competitor.

This man is Norbert Blüm, for many years chief administrator of the Social Affairs Committees. Blum is now making a bid for the chalrmanship of the committees and Herr Katzer, has made a painful discovery which, on a rule, politicians make before other mortals do: the cause is more important than Man after all, and the organisation's needs outweigh consideration even for its chairman.

After 14 years of impeccable work, time has run out for chairmon Kotzer, At the forthcoming election of the Executive Committee in early Juna he will no longer stand for election.

Only o few months ago, on 12 February, the National Executive Committee aaked the CDU's Deputy Floor Leader to stand for re-election. Shortly thereafter, Katzer fell ill with a virus infection which doctors were unable to diognose accurately:

They advised thair patient, who still suffered from o lung injury austained in speech which, made him persono non somo of his mony strenuous functions,

obtained his undertaking to occept the post of Minister of Economic Affairs in his Government once the Federal Republic of Germany was founded.

After the CDU/CSU had won the absolute majority in the third Bundestag election in 1957, Erhard succeeded Franz Blücher (FDP) on Deputy Chancellor. Supported by the nation's growing affluence, he passionately defended his concept of soziale Marktwirtschaft (a term , which can beat be translated oa "market economy with a social conaience").

Although he served os Minister of Economic Affairs in all Adenauer Cablnets, the Chancellor's reservotions concerning the political obilities of the professor of economics became more and more evident.

These reservations culminated in Adenauer'a rejection of Erhard's nomination for the office of Federal President and his own candidacy for that office although he dropped this idea when the CDU nominated Erhard rather than Franz Etzel for the Chancellorship in 1959

Even when the then FPD chairman Erich Mende, following his speciacular election success of 1961 (when the FDP captured 12.8 pcr cent of the popular votc), refused to become a member of an Adenauer Cabinet, the "old man" still refused to vacate his chair in favour of Ludwig Erhard.

It was not until 16 October 1963 that Erhard succeeded Adenauer. But he was unable to hold on to the legacy because too many hopes and expectations were pinned on him (not to speak of dangerous foreign policy setbacks); because lie proved unable to stop inflation; because even his close party affiliates had grown tired of his appeals calling for a tightening of bells and because they failed to understand and go along with his philosophy of a "formed society".

The end of the Erhard era came with

Hans Katzer to quit as chairman of top CDU group

Ludwig Erhard

(Pholo: Bund the resignation of the FDP Ministers at the end of October 1966, The FDP refused to countenanco the balancing of the following year's Federat Builget by menns of tax increoses.

The CDU/CSU then dropped Ethard and elected the Bailen-Württemberg Premier Kurt Georg Kiesinger who formed the Grand Coalition with Willy Brandt on i December 1966, thus for the first time bringing the Social Democrats into Government.

Although Erhard's fame receded rapidly, his advice was much sought even in his last years, and he spoke up whenever he saw that his economic concept was int jeopardy.

As senior member of the 8th Bundestag, he admonished the MPs during the opening session of 14 December 1976 o resist the threats and lares of those powerss "which are the enemies of our Constitution" and to contribute towards peace within and without. Eshard Mörbitz

(Frankfurter Rundschae, 6 May 1977)

torious social affairs work of this slightly built man. As a proponent of Ludwig Erhard's market economy and a dedicated adherent of Catholic socioldgy, he played a major role in bringing about the "312-mark Law" (legislation intended to promote saving), the so-called People's Stock and other major social legislation.

During his second term in office os Labour Minister (under Klesinger) he tenaciously opposed oil attempts at tompering with progressive oid age pensions. ile was also co-responsible for continued wage paymenta to stck workers, alhough he was defeated in his far-reaching demonds for worker's co-determination in industry. There, his porty refused to go along with him.

Katzer'a stepping down from this post as chairman of the CDA is not free of bittemess. Without mentioning his young friend of former days and challenger of today - Blum - by hame he neverthcless in a tetter chidea the Excutive Committee of this or for taking the discussion on personnel problems to the market placa instead of discussing the matter in committees.

According to the inner circla around Kalzer, Blum was not quite innocent in this matter. Korzer friends maintoin that Bitim used tha formers illness to promote his own image. The chonge of guard is obviously not

paintess business in the CDU, ond competitors have been known to kick each other on the alins in the process. Glinter Geschke (Deulsches Aligemeines Sonnt abblatt, 8 May 1977)

WEST BERLIN Klaus Schütz resigns after 10 years as Mayor

Districh Stobbe (Phoia: dpa)

High hopes for Dietrich Stobbe, the new Mayor

Dictrich Stobbe, 39, has never made any bones about the fact that he had the ombition of one day becoming the Governing Mayor of Berlin.

This desire was not discembbta in the first years of his political career. In 1963 he became the press officer of the then Berlin Schator for Youth and Sport, Kurt Neubauer.

Detrich Stobbe considers the time after t967, when he was the administrator of the SPD Porliamentary Party in the Berlin House of Deputies, as his apprenticeship, when he had an opportunity to gather experience - primarily in the field of economic affairs and university administration.

Despite his youth, Stobbe eamed himself a fine reputation. He was considered a man of the centre right wing of the SPD and thas always been renowned for his fair play, intelligence and organisational ability.

He manoged to keep out of olt inter-nel party diaputes which made it relatively easy for Klaus Schutz to appoint him Scnator for Federal Affairs and send him to Bonn In January 1973. This was a post that required a pronounced ability to mediate and thus suited Stobbe splendidly

....

Ø

Dletrich Stobbe, an East Prussian by birth, has used his time in Boun to gather experience in the field of Deutschlandpolitik and Ostpolitik.

A speech which he mode in November 1976 before o conference of district delegates in Berlin-Charlottenburg and in which he advocated a pragmatic Berlin policy without hair-splitting found nation-wide recognition,

Slobbe is not only one of the few genuine lalents on West Berlin's political scena; in view of the narrow majorities in the West Berlin House of Deputics, he is probably also the only man who has a chonce of scraping together an absolule majority for the coalition - especially in view of tha foct that he is on exellent lerms with Wolfgang Lüder, that Chalrman of West Berlin's FDP.

tKölner Stadl-Aneziger, 30 April 1977)

After close an ten years in office, West Berlin's Governing Mayor Klaus Schütz hes resigned. His successor is Dietrich Stobbe, 39, hitherto West Berlin's Sanator for Fedaral Affairs,

t remains to be seen whether Dietrich Stobbe, West Berlin's new Governing Mayor, will aucceed in getling a grip on the situation.

After all, the crisis surrounding Klaus Schütz, is not only a crista concerning an individual, but one concerning the whole Berlin SPD which has been with us for years.

It reached its climax when Schütz had to hand in his resignation, after the Stato Minister of the Interior Kurt Neubauar had to step down over o money affair.

When Klaus Schütz, at that time State Secretary in Willy Brandt's Foreign Mlnistry, succeeded Helnrich Albertz in 1967 he was confronted with a city wracked by student unrest and an SPD split Into right, middle and left wings and disintegrating.

Klaus Schütz, who subsequently became the Berlin chairman of the SPD, eventually managed to bring about a truce between left and right within the Party under the slogan "concentration of forces". But the truco become brittle as the right wing realised that its holdings still only aerved to strengthen the left.

Moreover, Schütz never managed to remove the label "Civil Servants' Party" from Berlin's SPD. Nepotisin and sycophantism became more and more ram-

And then, in the spring of 1975, came the rude awakening. As opposed to previsus elections, the SPD no longer managed to get an absolute majority.

Only by reluctantly entering into a coalition with the FDP were the Social Democrats able to retain their cushy Government seats instead of exchanging them for the hard benches of the Opposition

At that time they promised that they would purge themselves, but the party leadership feiled to sustain its self-criticism and eventually reverted to muddling along.

The sequence of scandala, which reached its climax with the Kreisel-Complex affair and the attendant resignation of Finance Senator Strieck, continued

In following telephone conversation

took place in Berlin 29 years ago

between General Lucius D. Clay, at that

time US Military Governor in Germany

and creator of the Berlin Airlift (1948),

and Ganaral LeMay, Commonder of the

Cloy: Do you have any aircraft thet

LeMay: The line's bad ... I keep hear-

ing you osking about aircraft to transport

Clay: Exactly! That's what I said

LeMay: Tha Air Force can transport

coal.

anythingl

LeMay: Corry what?

saved Berlin, Lucius D. Clay, turned 80 on 1 May.

General Clay, Airlift creator, turns 80

Lucius D. Cloy is today an executive with a canning company in New York. Says he: "I never worked as hard as that time in Berlin. But we made it. And perhaps the Airlift speeded up ny'a joining the Western camp."

The octogenarian then went on to say: "I never had any real friends in Germany." But thare he is wrong. When, following the building of the Berlin Wall in 1961, John F. Kennedy made him his personal envoy to Barlin, General Clay was given a rousing welcome in thet city.

For the Berliners, Clay has always been a friend and as a token of their gratitude they made him an honorary citizen and namad a street in one of the best parts of the city after him; Clay-Allee. (Hamburger Abendblail, 23 April 1977):

with the KPM affair that led to the resignation of Senator Liehr.

And then come the jailbreak of four women anarchists which induced Senator of Justice Oxfort to hand in his portfolio. SPD spokesman Burger was arrested on auspicion of espionage.

In connection with the KPM affair, the Public Prosecutor's Office announced that it might boya to institute proceedings against the Governing Mayor. And on 19 April, SPD Floor Leader Haua, frequently referred to as Mr Clean, alao had to give up his portfolio. There were not many areas in which Schtttz and his Senate could, point to successes. Contrary to their pledges, they had failed to turn Berlin into the "model of a modern metropolis", an alr junction and an "East-West Exchange".

Instead, the number of industrial jobs diminiahed by about one-third within five years, and major West German companies reduced their investments in Berlin. New industries have falled to settia in the city, and losses through businesses leaving the city can no longer be offset

Schülz was obviously aware of this development, but he did nothing to stop it. It is contrary to his nature to tell othera what to do, and ao far as the many affairs are concerned, he was certainly not personally involved in the bid for offices and sinecures.

But he also did little to put an end to this game for this would have been out of keeping with the standord of a political scientisl whose ambitions essentially still lie in the field of foreign affairs.

Schiltz' weakness as a leader became more and more obvious. And in the post few months he only occupied his place in the Rathaus because there was no successor in sight who would have been acceptable to the Bertin SPD:

Neither Ristock nor Riepschläger could expect to get the necessary majority. And even Senator Stobbe seemed much too young to become the successor of Ernst Reuter ... and the Berlin SPD resents "imports from Bonn".

Berlin's Governing Mayor must devote as much hime to administrative problems as to mejor politics. Schutz' exclusive interest in the latter proved his undoing

His successor, Dietrich Stobbe, does not exoctly have much administrative experience either - nor did he need to as Senator for Federal Affairs.

It can only be hoped, in the interests Berlin, that he will now occupoy himself with such matters lest the city tumble from the frying pan into the fire. . Liselotte Müller

(Frankfurler Neue Presse, 30 April 1977)

willing to speak his mind The time hos come for West Belic Governing Mayor Klaus Schütz, to take his leave. His party recalled him when crisis tuations became the order of the day is his Senate. Berlin was inuodated with political scandals, affoirs and incidents - a flood tide which, having came away Kurt Neubaucr, hus oow also claimed Klaus Schütz.

He governed Berlin longer than any other post-wor Mayor - and that means longer than Ernst Reuter and Willy Brandt

Although born in Heidelberg, Schla is a Berliner, for he has lived in that my since the oge of ten.

Herr Schutz came into the political limelight as a disciple of Willy Brand, who was instrumental in his career. And it was Brandt who, in an equally critical situation, prevoiled upon Schutz to succeed Heinrich Albertz as Governing Mayor of West Berlin in 1967.

It does not make Schutz departure my easier to have the. SPD's Federal Administrator, Egon Bahr, play a major role in it. Bahr ond Schutz have neta seen eye to eye and are reputed to k like cat and dog.

Both of them have always been close to. Willy Brandt and have always vid with each other.

Schütz, who failed to keep a tight it's on the "Party of Civil Servants", as Br " lin's, SPD has been, dubbed, was not ! Mayor who made no mistakes, but M term of, office was always, marked by personal honesty. A 4. 1 34 1 He was a passionate proponent of Ostpolitik and never hesitated to let public accusations at the East bloc for its constant treaty violations, although ass always Iriedate the Bonn narty prevail upon him to exercise; more re-

straint, Sec. 6 5 124 In his Berlin home Schutz will not find plenty of time to devote to his is vounite occupation, namely, tha reading

of political literature. . He will also have plenty of time it: ponder the question ; whether it is to late to embark on a new political career In any event, the fifty-year old hardy gives the impression of a mon who has nothing left to dream about but his poter sion.

THE GERMAN TRIBUNE

HOME AFFAIRS Bonn plan to number each citizen is dropped

B lg Brother has suffered a defeat, and George Orwell's omniscient electro-But the Initial euphoria was followed by an awakening that culminoted in the nic slate as depioted in 1984 has been shelved for the time being.

The Conference of Ministera of the Interior (State and Federal) has decidedto drop the project of an Identification. number for nll citizens of the Federal Republic of Germany.

The project, which would have turned our citizens into "transparent people of gtass", has thus been put on ice for a number of years, according to the Northrhine-Westphallan Ministry of the interior. Other observers even go so fer as to believe that the "citizen's identity number" has been abolished for ever.

Two years ogo, when the computer euphoria was rampant among officialdom ot all levels (Federal, state and municipal), the Bonn Ministry of the Interior presented o draft for a new Federal Registration Law which, as the dot on the I, so to speak, contained the citizen's identity number.

According to this draft, every citizen was to be allocated o 12-digit number under which he would be registered in all officiat data banks.

Even privately owned data banks imincliately declared their willingness to switch over to the new numbering system. The first slx digits of the ldcntity number were to have given the date of birth, the seventh digit, the century of birth, ond digits eight to eleven were intended as an individual number by which to differentiate people born on the same date. Twelve was intended as an additonal test number.

Experts were jubilant, maintaining that people with run-of-the-mill names would no longer be mistaken for each other under the new system.

This, they believed, would sove the citizen a tot of running around from pillar to post of officialdom; ond when moving from place to another he would no tonger have to fill out one form to register himself out of one domicile and another to register himself into the new

It would have sufficed to file one form onty, and the computer would have taken care of the rest, passing the relevant new dota on to the Federat Insurance Office, the Heatth Authority, the Federal Labour Exchange ond the traffic authorities.

warning of the CDU data aafeguard expert and former Bundestag Member Johannes Gerster

Speaking in Parliament, Herr Gerster soid: "This citizen's identity number can lead to the electronic concentration of oll data from all authorities in a single data bank.

"The citizen would become glasslike and transparent to ony state outhority. which would know too much about him and would thus indirectly induce him to aulant his behaviour accordingly."

Now already some 22,000 computers in government offices, private compauics and associations contain some 20,000 million data about citizens of the Federal Republic - an average of 300 per person.

So why all the fuss about the cilizen's identity number? Every data bank uses n different number for each citizen today.

Fritz Müller might have the number 325987 with the tour operator X and the number 932345 with the State Security Office.

As a result, such dala are not centralised and it is impossible to switch over from one computer to another.

The amassing of information in various dato banks is already explosive enough. But any government office wanting to obtoin information about a citizen today must write to other government departments specifically asking for contputerised doto.

This procedure is permissible even after the passing last November of the new data safeguard legislation. Government authorities are specifically authorised to collect and transfer all data which they require in fulfilling their function.

But under today's system this procedure requires o great deal of work and every request for data is on file and can therefore be controlled.

Every government office knows to whom it has passed on information about citizens. But if the Identity number were to be introduced, auch data would be available to every computer under the same number.

It would therefore suffice to feed the number into one computer in order to induce all data banks to spew out the infonnation stored in them.

Bribery allegations

after payments to

Such a computer portrait of a citizen would be virtually complete. It would contain his marital status, divorces, Illegitimete children, chango of address, yenereal diseases, inoculations, occupational abilitics, work references, employment, income, tax debts, criminal records, ownership of real estate and automobiles and political affiliations. While - last year still - the Federal

States unanimously demanded that the Identity numbers be introduced, the CDU in the Bundestag called for a ban on the basis of the data safeguard legis-

And the Legal Committee of the Bundestag expressed constitutional reservations, arguing that the numbering of citlzens was a violalion of human dignity and that it entailed the danger of

As a result, the draft for a new Federal Registration Law was put on ice.

At the latest conference of the Minislers of the Interior the states once more domanded of the Federal Minister of the Interior that he at last present a uniform Registration Law with Identityuumber.

The Northrhine-Westphalian Minister of the Interior Hirsch passionately opposed the introduction of Blg Brother, saying that this topic could only be raised again once data safeguards on both state and Federal level had been improved considerably.

At present, he pointed out, only Hesse and the Rhincland-Palatinate have data safeguard legislation. The Conference of the Ministers of the Interior aubsequently dropped its demands for the identity number.

Following the foundering of the the plan for the citizen's identity number, we are faced with a legally dubious situntion. Anticipating Federal tegislation to that effect, eli stetes began numbering their citizens.

As o result some 46 million of 62 million citizens have already been umbered at a cost of DM18 million.

The Federal numbering procedure has meanwhile been stopped everyhwere olthough the states already have their data banks in which citizens are numbered according to state procedure.

According to some legal experts, the constitutional reservations concerning the Foderal citizen's Identity number must elso apply to all other such numbeing aysteins, Other experts disagree, pointing out that state numbers cannot be objected to, because they apply only to citizen's registration and are not linked with other authorities of the state, let alone across state borders.

Horst Zinumermann (Der Tagesspiegel, 30 April 1977)

smaller if they only put out their hands for the money instead of marching under the banner of idealism.

Something stinks in Bergkamen ... it is not the atench of pollution from the power plant, but emonotes from those who cleoned up.

The city itself ploys a somewhat mysterious role in the whole affoir, having collected 600,000 "Steag-morks" for aocalled infrastnicture incasures.

llow come? If the power station was intolerably dirly the city could easily enough hove demandad tha necessary filtration instollotions instead of bakshcesh for kindergarlens... or do other eltics do the same?

llos it become a matter of principle now to milk the companies which provide enargy and jobs and to molign them as givers of bribes to bool? The whola thing ories out for an investiga-

First arrests in killing of Siegfried Buback

Günter Sonnenbarg, 22, and Verena Becker, 24, were taken Into custody after en exchange of gunftre with the police in Singen, neer the Swisa border, on 3 Mey. Sonnenbarg is ana of tha men wanted by police in connection with the murder of Slegfriad Buback, fedarel director of public prosecutiona.

fter on unsuccessful three wecks A search for the assassing of Chief Federal Prosecutor Siggfried Buback and two other officints, the police and tho Internol Security Office were more or lesa up o blind alley.

It seemed as if (like aftor the assassination of the Berlin judge yon Drenkniann and the Lorenz kidnapping) the search would extend over many months. But the first success enmo unexpectedly soon.

Even this arrest in itself provides important insights into the links of the arious terrorist groups in the Federal Republic of Germany.

Sonnenberg, for Instance, was not listed as a potential terroriat until ofter the arrest of the former Baader-Meinhof defence counsellor Siggfried Hong last November.

Verena Becker, a member of the Movement 2nd of June which was responsible for the Lorenz kidnapping and the Drenkmann assassination, had already been convicted for her part in the Febniary 1972 bonib attack on the British Yacht Club in Berlin. She was exchanged for the kidnapped Bertin politician Peter Lorenz in March 1975.

The link between veteran terrorists and terrorism's young blood is closer than hitherto expected.

{Die Zell, 6 May 1977)

Luck and method helped

Ithough the arrest of Günter Son-Anonberg and Verena Becker is essentially a police matter, it nevertheless could have considerable political consequencea.

Since the police succeeded in apprehending at least one of the suspected murderers of Chief Federat Prosecutor Siegfried Buback some of the latent apprehension that high-ranking representatives of the state could be shot dead with impunity has been dispelled.

This could help relieve some of the pressure on our law-makers to engage in dibious monipulations of the law only In order to counter the impression of the state's helplessness.

Even though the dramatic arrest of the two terrorists is an unqualified success, there is nevertheless no reason to feel relieved. The events in Singen clearly demonstrate, thet there is no such thing as a fool-proof method in combating this type of erime. But it would be equally follacious to attribute the Singen success purely to chance.

In actual fact, eriminais of this kind can only be asbbed by spreading, a finemesh net as widely as possible in order to profit from "chance" mistakes of the criminals and from information received from the public,

In Singen, two - and subsequently even more - policemon risked their lives. But even this daring and somewhat thoughtless dedication on the part of the pollce would have remained unavailing had the terrorists not alupidly monoged to get themselves into a cultion. (Die Well, 6 May 1977) de-sac. (Suddeutsthe Zellung, 6 May 1977)

Allegetions of bribery and corruption over a proposed powar station in that Ruhr htt tha headlinaa recently whan an Essen power company egreed to pay one end al helf million deutschmarks in compensation to 72 mambars of a protest group in raturn for their silance about plans to build a melor coel-firad power station in Bergkamen, neer Dortmund.

The moncy-grabbers of Bergkannen . were outraged, saying that all they wanted was "their" money. In fact - if thoy are lo be believed, that is - they aro not a citizens' initiative ot oil because, as one of them put it:."We bore. the risk of a court case, and we have by no means sold out our convictions."

So they say ... as if oll that were involved were shinply an out-of-court seltlement between Steag and those who. have suffered potential damaga through pollution by the power plant.

citizens' protest group But this was not how our valiont fightors started off. On the controry; they called themselves clearly and unmistokably "Initiative Against the Construction

of the Plonned Coal Power Station".... Anyone who calls himself "Initiallye" must put up with being considered exactly thut ... and anyone who dantonstrates "ogainst the construction of the plonned coal power station" in no way mokes it known that he does not object to the construction of the plont provided the money is the right colour.

The most likely explanation is that some of the experienced old foxca felt that the chequa could turn out to ba

ECONOMICS

Growth certain in 1977, but forecasters differ over extent

It is an indication of uncertainty on Line part of forecasters when, of five econoinle research institules, two (110 and RWI) estimate the real growth in the GNP for 1977 at 3 to 4 inatcad of 4.5 per cent. In abaolute terms, this represents, after oil, a difference in growth of some DM18,000 million pr more than DM800 per working citizen.

Our econonile pundits are certain that the economy of the Federal Republic of Gennany is still in an "upward phase" and that we ligve not passed the turning point to a new recession.

But in all other respects the forecast for 1977 is more a matter of temperament thru of knowledge. Thus some forecasters (the more optimilatic ones) apeak of 4.5 per cent while the pessimisls opt for 3.5 per cent. But neither of these figures can be substantiated.

The reasona for this uncertainty are obvious ond are carefully listed in the "spring forecast" as an explanation for any critics.

• It is aignificant for the present upawing that brief periods of rapid growth followed periods of alow, development and vice versa.

• These uncertainties are now furllicr aggravated by llio impondemble clements of statistics. The monthly re-ports of the Federal Statistical, Office concerning incoming ordera, the deve-lopment of the labour market and production are being restructured. As a re-sult, no economist knows at the moment to which extent the drop in incoming orders at the beginning of the

In its just presented business report for

1976, the Deutsche Bundesbank (this

country'a Central Bank) gave itself and

year reflects the state of the economy or is due to statistical vagaries. . The figures of the joint diagnosis

by the five institutes are based on overall calculations provided by the Statistical Office, .:...

But these are to be fundamentally revised in the immediate future. As a result, not only the level and the structure, but also past trends in the economy will present themselves differently. The change can therefore alter all forecasts based on comparisons with the previous

In view of all this, it would seem pointless to try to guess who assessed the economic development for 1977 correctly in the spring report - Ifo and RWI or the other three,

For actual economic policy-makers it is more important that all research instilutes are agreed on the prerequisite of an upswing and of full employment. Their recommendations are conspicuously and impressively similar to the Bundesbank analysis of the cnusea of uncinployment

Much to the discuclishment of the trade unions, the Bundesbank declared that unemployment was, above all, consequence of aggressive wage policies in the past.

Tha research institutes have now, in keeping with the Bundesbank thosis, developed the following formula for what they consider a correct wage policy; "In a situation such as the present, the increase of wages in real terms should be less than the domestically available in-

Institutional forecasts 1975 1976 Trinic Autumn Soring (+5.5) +3.5 to 4.5 +5,6 Percentage growth Worse these expected +0.5 32 Worse the expected Jobless between 900,000 and 1 million +70 Belter then expected +4,5 +4.5Consumer price rises +4

Dempened expectations for 1977

crease in productivity in order that profits and hence investments may rise, thus helping to reduce unemployment."

According to the institutes, productivity will increase by 4 per cent in 1977 and consumer prices will rise by the same figure, 1977 wage deals should be clearly below the 8 per cent mark if the unemployment problem is to be amellorated.

Reacarch institutes, Bundesbank and FederalGovernment agree with this concept in their annual economic reports. The trade unions must find it harder and harder to exculpate themselves in the face of such generally held views which are the more convincing because they come from neutral quarters.

The Federal Government, too, will read the spring report with mixed feelings. The institutes are pretty outspoken in their criticism of the Government's tax package which includes an increase of VAT by two per cent (DM12,000 million per annum) and tax reductions (for business as well) of DM6,000 million.

According to the inistitutes, the r crease of VAT should be abolished in gether; but tax relief should be guid even if this means a slower reduction the deficit.

Says the report: "What we need in growth policy are more tax incentie for stopped up investment, Reduced to progression is worth considering in the context, as are better depreciate tenns.'

In order to reduce the state definition nevertbeless, the institutes suggest th state aubsidies for savings be restrict - a measure which can certainly not k termed unsound economically,

But such recommendations show the the research institutes are somewhat to detached from the economic scene After all, reduced savings incentives in other words, subsidies for the man-inthe-street - in order to promote business profits might be the correct measure theoretically - but is it politically feasible? Hans Mundor (Handelsblalt, 29 Aptil 15

Federal Republic of Germany came up close to a foreign trade balance and that it has thus supported efforts to reduct inequilibrium the forcign inde balances of other countries."

The year 1976 was not free of foreign trade disturbances. The Federal Republic of Germany waa on two occasions subected to a heavy foreign' exchange itflux which mada it difficult at times. sufficiently limit the money supply.

It is at least partly due to these facts that. tharmoney. aupply: target for that year was somewhat exceeded.

The Bundesbank report makes it cks that the central bank considers the conrection of distribution of Incomes ret tions last year as a basis for a lasting up awing still inadequate.

But the year under review has brough e ... olean ... improvement lin . ibusines incomes which rosa by 14 per cent. Fa the first time since 1968 these income exceeded the increase in the income wage and salary earners, which amount ed to 7.5 per ceht.

The Bundesbank reiterates in lis is. port that the first wage deals of 1971 were at odds with the general situation. This, the report says, gives not to fears that wage costs will rise age this year, the surger department

Wage deals concluded so far in 1977 indicate that the average annual week and salarles will rise more rapidly that in 1976 and that they will thus incress the ahare of wages in production costs. Collective "bargaining" deala of this nature seem tollignore the fact that the cost of living increases in 1976 wet (Hannoversche Allgemeine, 28 April 1927)

the government'a economic policy good marks According to the report, the moncy supply objective of curbing inflation still further while at the same time promoting economic recovery has been achieved to a large extent - and in two areas It has even been exceeded.

For one thing, inflation dropped below the 4 par cent mark at the end of 1976 and, for another, the real growth in the GNP reached 5.5 per cent, thus exceeding expectations. But the report alao points to the trouble apots, above all to the situation on the labour market which is anything but rosy.

According to the Bundesbank, lasting auccesses in combating unemployment can probably only be achieved with a combinstion of specific labour policy measurea and a strong economic growth as well as further progress in combating inflation.

As a result, stabilisation must not only relate to prices, but also to production costs and the long-term expectations of business - above oll with regard to that future lax burden it might have to bear. "The cost-yield relation must laatingly be atabilised et a salisfactory level", says the Bundesbank report.

By choosing a monoy supply target for 1977 which will restrict price increases whillo at the same time leaving enough acope for 'a healthy growth, the Bundesbank has clearly indicated in which manner it wants to contribute lowards sofving existing problems in 1977 as well.

According to life Bundesbank report

business continued to be cautious with regard to new employment in 1976.

its initial objective was to provide full-time work for those on short ahifts. As a result, the number of short shift workers (annual average) dropped from 770,000 in 1975 to 280,000 in 1976.

All in all, the reduction of unemployment proceeded only slowly. in fact, structural difficulties which dampened the demand for labour in individual branches of industry and in apecific regiona becama only more pronounced during the period under review,

While a abortage of skilled workers becama increasingly obvious, unemployment among the less qualified and among certain white collar workers remained relatively high.

Psrticularly significant, the report goes on to say, was the fact that continued anti-inflationary policies proved compatible with economio growth. The recovery was slow, but sustained and no-ona expacted an actual boom.

In fact, the Bundesbank complains that business in many instances underestimsted the economic impulses at work, Overall production clearly exceeded prerecession levela by the end of 1976.

But the construction industry was unable lo keep pace with overall growth. The report points out that diminished demand for construction is by no means cyclical and that it is unlikely that this

importance for the economy as a whole." ita share of the GNP dropped from 7.5 to 6 per cent during 1976. The wholesala and retail trades" ahare in the GNP also increased more slowly than that of industry.

As opposed to previous recovery phases, the motive power of recovery was private domestic demand. Business and private . Individuala .. increased investment and consumption expenditures by DM81,000 million In 1976

This corresponda to close to 90 per cent of the total nominal growth of the GNP. The improved investment climate has been enhanced - apart from the investment aubsidies - by better business profita following the losses of the previous years. Another, important alement was do vate houaehoida.

Foreign demand in general proved an important pillar of tha domestio economy, But the Bundesbank points out that demand impulses from abroad - no; matter how atrong - were matched bythe impluses provided to foreign county tries by increased importation

THE GERMAN TRIBUNE

SHIPPING Plight of German shipyards worsens as order books get thinner

Gennans: But now the same applies to: the slupyards of Singapore and Korea.

Says Conrad von Sydow, chairman of a Hamburg-based ahlps' mortgage bank: . "After all, thare isn't much to it lo rivet a ship together."

The whole thing is a pretty nerve-wracking business for shipbuilders in the Federal Republic of Germany. They are weathering a atorm which is growing rather than diminishing.

Since shipyards throughout the world will at best bo able to utilise half of their production capacities as of next year, is obvious that they will fight for every order.

Moreover, since the competitors in Japan, Korea, Singapore and Talwan are about 30 to 35 per cent cheaper, and since more and more shipowners are unable to rosist this lure, German shipyards are the losers in the struggle for

Only two years ago, Minister of Eco-nomic Affairs Hans Friderichs stated perfectly correctly that our shipyards in llamburg, Schleswig-Holstein, Lower Sn-Kony and Bremen had full order books, but he concluded wrongly that "they are in a position to provide secure jobs."

Conditions which are today causing us our emptoyment headaches were already in full swing in 1975. The tauker boom was followed by an inequalled depression on that market, resulting from the oil crisis.

These tankers, which now nobody wants, at one time amounted to threequarters of the tounage on order. And no one expects the shipping industry to get out of the doldnims before 1981. At present we have 250 super tankers too

As a result of their having specialised in the construction of mainmoth tankers, the Japanese were hardest hit by the end of the boom in that business. But they were quick in adapting to the construction of other types of vessels and were thus able to consolidate their position on a shrinking world market.

During the past three years they produced close to half of the global tonnage and - as a result of their agressive price pollcy - they captured 60 per cent of global new orders,

For the German's (1976 furnover about 6,600 million deutschmarks) there remained less and less of the cake. They will hardly be in a position to retain their third place in the 1976 list of slupbuilders (after Japan and Sweden) since this country already takes eighth place in terms of present orders - ranging behind countries like France, Spain and Brazil.

The trickle of orders has dried virtually completely since January. And yet local shipowners are showing a great deal of interest in new ships - but in . the Far East rather than at home. As tion topped all other Federal states in one shipyard manager put it: "We have 1976. to put up with being ridiculed about our i prices."

The final slock came in March when a group of Hamburg shipowners centering around Klaus Oldendorff ordared teu container ships at once - of which three as an option — in Singapore, Tha slein with 29.8. Hamburg with 22.9 and s GRT, less than in the previous year. down the ways, Oyama was bankrupt. Order was worth DM120 million. Lower Saxony with 11.4 per cent. Glinter Beneke-Kracht Heinz Blüthmann

There can be no doubt that this sen- Concerning labour employed in ship-

Everybody knows that the Japanesa ailive branch of industry is suffering can build as good a ahlp as the from acvare withdrawal symptoms. Even from acvare withdrawal aymptoms. Even in 1975 and 1976 the volume of Incoming orders amounled to less than onethird of the completed tonnage, and this disproportion is even greater now.

Tha thin order books of may shipyards - among them the now one hundred-year old Blohm + Voss yard in Hamburg - have meanwhile alrunk to such an extent as to be insufficient to provida enough work even for the current year. As Werner Bartels, Chairman of the Shipbuilding Industry Association, put il, "We are headed for a major structural crisis."

Baukruptcics among the thirty or so alipyards along the Baltie and North Sca coasts ore clearly in the offing. As banker von Sydow put it, "It can only be a last resort for shipyards to build vesscis for their own account."

Herr Bartels estimates that of the 30,000 peoplo still employed in the new construction of deep-sca vessels (of a total of 70,000) ona in three will lose their jobs; 6,000 becamo redundant bi the period from mid-1975 to the end of

With regard to the general reduction of production capacities by 30 per cent, as envisaged by Herr Bartels, they will primurily lead to the closure of smaller yards because, as banker von Sydow put "slirinking by 30 per cent is ccouomically unfeasible for them."

Only the five big ones! namety Howaldtswerke-Deutsche Werft (HDW), AG "Weser", Blohm + Voss, Bremer Vulkan and Rheinstahl Nordseewerke, could survive such a starvation diet because of the strong major stockholders behind

The Salzgitter concern, in which the Federal Republic of Gennany has a 74.9 and the State of Schleswig-Holstein a 25.1 per cent stake, decided not to collect its 120 million deutschmarks worth of HDW dividends in order to make sure that the anchor of Germany's largest shipyards holds in the forthcoming

HDW is fortunate enough to still have aufficient orders to keep it busy for the next 18 months - although half of lliesa orders will be loss deals.

The official communique in connection with the departure of one of the board members of HDW threw aome light on what is in store for the yard.

According to the Salzgitter, announcement, Peter Knappertsbusch, in

Recent information made public by building, however, Bremen occupied acbyards bears witness to Breinen's nosition in shipbuilding.

According to this information; the value of Breman's shipbuilding produc-

With its i,870 million deutschunarks, Bremen accounted for 31.1 per cent of the Federal Republic of Germany'a total shipbullding production of DM6.000 nuillion,

Bremen ia followed by Schleswig-Hol-

charge of sales, had to go because the top echelon could not be exempted when it caino to cutting down on staff.

Understandably, Werner Bartels is reluctant to say which of the shipyards he expects to founder. But even so, he frankly admits that "the shrinking proccss will hit us hard - dospite all assistanca measures."

... Alarmed by the SOS signals from the shipbuilding industry, Bonn decided to restock the assistance funds. In order to "help get the order books aflout again" as Chancellor Helinul Schmidt put, it, Bonn wants to dole out more cash to the shipowners - but of course nol for trips to the far East.

Subsidics will be available only for ships which they have built in this country's yards. Instead of 12.5 per cent of the construction price, as hillierto, they will be made a 17.5 gift by the taxnaver

But even this is not chough for our shipowners. They know all too well that It is atill cheaper to build in the Far East und that, as Henry de la Trobe, lical of the Shipowners' Association and of the Oetker-owned shipping company llamburg-Süd, put it, "This subsidy still falls short of matching international prices."

Another shipowner put it even more bluntly, saying: "Once the crisis is really with us, Bonn will be quite happy to raise its subsidy for new constructions to 22 per cent."

The shipowners are also irked by the conditions which Bonn attaches to the financial booster shot. The thus promoted vessel has to sail for eight years (fonnerly ten) under German flag. Moreover, the shinowners must permit their books to be audited and must even pay taxes on the subsidies.

In actual fact; the assistance for shipowners - which is paid from the budget of Bonn'a Ministry of Transport - was originally introduced in order to offset the added operating costs of allips under German flag. As one German shipowner said, "The English and Greek flags are fifty per cent cheaper."

But although the gap batween Ger-man and foreign flags has widened rat-her: than diminished in the past, our ahipowners must cope with this on their

··· Virtually all of them do so by operating at least some of their ahlps under flags of convenience, in the case of. Oetker, this figure now stands at eleven,

Bremen builds most German ships

per cent) after Schleswig-Holstein (28.5). Hamburg had 20.7 per cent and Lower Saxony 18 pericent. The overall labour force diminished by 3.232.

DM3,740 million of this country a new construction and repairs in the shipbuilding industry were export orders; 163 sea going vessels with 2.11 million GRT were completed in this couotry in

(Frankfurier Rundschau, 4 May 1977)

the two last vessela having been register. ed under Singapore flag this month.

They are two 90,000-ton tankers (smoll enough to pass through he Suez Canal) which Oetker bought for DM35 million each (65 per cent of new value) from the estata of the Greek shipowner Colocotronis.

It is still anybody's guess to what extent these subsidies will used. The relevant application forma have only just been sent to the ahipowners.

Moreover, it remains inclear whether the four coastal atates of this country will go along with Bonn'a proposal to participate with DM25 million in the DM255 million programme. In such a case it would be possible to subsidise DM1,500 million worth of new construction to the tune of 17.5 per cent.

Lower Suxony's Minister of Economic Affnirs Ernst Ktipker recently rejected this proposal, saying that assistance to the shipyards was a purely Federal mut-

But unofficially, this is considered increiv an attempt on the part of Lower Saxony to keep the financial burden for that state as low as possible because it has not yet been decided how the DM25 million is to be divided among the states

What the argument is all about was recently explained by an official of the Hamburg Economic Affairs Authority. who sold: "We don't want to subsidise ships which are then going to be built in Schleswig-Holstein or Lower Saxony

Even though tocal politicians are leave ing the shipbuilding industry in the lurch out of pure state egotism, the shipyards nevertheless managed to get some relief on the international front.

After months of pressure from Westem famore, the Japanese agreed to restraint until the end of 1978.

This means that they will accent no shitibuilding orders for German account during that period, that prices will be increased by 5 per cent und that they will again dismiss as many workers in their shinbuilding industry as they have donc since the beginning of the crisis namely 30,000.

Such limited concessions cannot have been too hald for the Japanese to make because, as the chief executive of the world's largest shipyard, Ishikawajima-Harimo Heavy Industries (IIII), put It, 'Europe'a yards ilave no future."

Moreover, the Japanese concessions still leave enough loopholes for German shipowners. As one of them said, "If I want to build a ship in Japan I'll get it bullt there."

Thus, for instance, the bon on German orders does not apply to foreign subsidiaries of German companies. new construction intended for Genuary can therefore easily be built under one of the cheap flags, such os Singapore, Liberis or Paname. Having extended their shipbuilding

capacity by 970 per cent in the past ten years, the Japanese can today meet the entire world demand and will therefore continue to accept German orders notwithstanding formal hurdles. But a Ja panese order going to a German allp-yard, on the other hand, would be as unheard of, says a German shipbuilder. as a "three-masted barque in the Salia-

Fassbinder's Chinese Roulette shows failure of a marriage

DEUTSCHE ZEITUNG

Not since Nora, n TV film, has Rain-er Werner Fsssbinder msde such an artificisl, cold, arty-crafty fitm ns' Chineen Poulatta

It was shot on location last spring in a small castle in Stöckach, Franconia, where Fassbinder and his production team spent seven weeks virtually isolated from the outside world.

They lived together in the castle and personally underwent the subject of the plot, or perhaps it would be better to say the confrontation between the actors, in Chinese Roulette

The film might best be described as the choreogrophy of a marriage that has proved a foilure yet is desperately kept up for appearance's sake

The protagonists are Christ, played by Alexander Allerson, and his wife Ariana, played by Morgil Carstensen. Bul the motive force behind the oction is their dnughter Angela, played by Andrea Schober.

Angela, who is paralysed in one leg, is detennined to break up the living lie of a relationship that her parents frenziedly try to keep up.

She arranges for her father to arrive at the castle with his French mistress of many years' standing, ployed by Anna. Karina, at the same time as her mother lurns up with her lover, Ulli Lommel.

Angela's objective is to make her parents drop their mask of deception, and she finally succeeds in escaloting a conflict-laden aituation to overt hatred.

The protagonists are not merely the four adultererers but also Brigitte Mira as the castle housekeeper, Volker Spengter as her son, a young man with poetic pretensions, and Macho Moril as Angela's deaf and dumb nurse.

Angela wants her mother to commit herself to the reason she alleges is responsible for the fallure of her marriage - her daughter's lliness - but the pisn comes a cropper.

On two occasions the mother has a pistol in her hond and is on the point of shooting her child, but each time the father frustrates the murder bid. Instead. Angela's nurse dies. A shot is fired in. the closing scene of the film loo, but Fassbinder does not indicate who the victim is.

Having shot the film in virtuolly a single location, Fassbinder orranges the action in whot, on the foce of il, ata

をし

The characters counterpoint one another, the camers pans along reflecting paues of gloss, seeks out aris and crafts perspectives unong the figures in the castle, moves around outside among the undergrowth and points up at treelops.

It is a sterile, inaccessible and select puzzle with few traces of nature or life, since the characters too resort to telllale bul unnatural gestures.

They often make faces al each other in accordonce with their moods of the

moment and seem unable to attempt either subliety or a cover-up of their emotions. They frenzieully act out Fassbinder's franzied choreographic movements.

There can be no doubt whataver that Rainer Werner Fassbinder, who remains this country's most prolific, dynamic and self-destructive film director, intentionally screened his film in precisely this wny

What ha wanted was exact and exaitcd optical motion, coldness, directness and on exaggerated sense of clausirophobia in which people, like animsls in a zoo, stumble against the bsrs of their cage and are only capable of honest, albeit homicidal, action once all their escape routes are blocked.

In this he succeeds - despite the mannerism. Fassbinder's celluloid gyralions drive the actors into a corner, destroy their ritual and show up the faces, behind the masks.

In this game of truth, of Chinese Roulette, question and snswer so unrelentingly close in on the individual that the or she is eventually left with no option bul to explode and nali colours to the mast.

"I mainly made the film because it appears to support the institution of marriage whila showing in greater detail how mendacious and destructive marriage can be than other films ostensibly intended to lambast wedlock," Fassbinder notes.

Regardless of Fassbinder's intentions the revierwer does not feel that Chinese Roulette deals such a telling blow at the institution of mamage.

It does, however, bring to the surface on objective he somehow fails to achieve in much of his work - the desire to show genuine affection, true love and, if need be unbounden hatred.

Poses, phroses and compromises are brutally shown up for what they are tittle white lles. The truth is only brought to light by means of o painful process.

The truth may be dreadful, indeed evil, but Fassbinder seems to feel that It is nonetheless more valuable than spurious and insincere harmony of whatever kind. Eckhart Schmidt

THE GERMAN TRIBUNE

EDUCATION 20 projects to determine how best to teach foreign children

The children of foreign workers in the Federal Republic of Germany have an incomparably much harder time. than children of Gennan parents working abroad.

While there are German schoola available for German children abroad schools where they are taught along the lines of the German curriculum - the children of so-called "guest workers", in, this country have no such facilities at their dispasal. They must attend school together with German youngstars.

According to the Federal Ministry for Education and Science, the proportion of foreign students in primary and secondary schools ranges between 3 and 30 per cent, depending on the region.

In 1974/75 there were 358,711 foreign students at such schools, 104,616 of whom were Turks. In 1964/65 these foreign students numbered a mere 35,135 of whom one-third were Turks.

The first "measures for the schooling of guest workers' children" were decided upon at the State Ministers of Education Conference in 1964, following the introduction of compulsory schooling for the children of foreigners as well. The new measures were to "facilitate the adaptation to German schools."

But It was not until 1971 that, in the face of the ropidly growing number of foreign workers who were subsequently ioiucd by their families, tha State Ministers of Education established s Work Group whose task it was to coordinate the measures of Individual Federa States.

The discussion at the time revolved around two main problems, namely the question whether foreign children should be tsught in independent foreign schools or whether they should be integrated in the German school system.

If it could be assumed that the guest workers would be integroted in the political and social system of our state, the

It was past midnight a few weeks ago when "The Wizard" in a horror film shown on one of this country's major TV networks struck. Glued to the TV screen as the gory scenea unfolded were 60,000 children aged between three and seven and 230,000 eight to 13-year olds.

When "Hard Fists Toted Hot Colts" the wea hours of the 13th of March were already with us. Just before I a.m. there were still 50,000 three to 7-year olds and some 170,000 eight to 13-year olds toting along. And when "Criminel File, No. XY

Unsolved" (a re-enactment of actual crimes for the purpose of enlisting publie support in tracking down the criminals) began on 11 March, there were 140,000 small and 1.5 million bigger hildren watching - representing 29 per cant of their respective age groups."

These frightening figuros speak for thomselves. Bul since teleskopie, the Institule for Research into TV Attitudes. began examining the viewing habits of children on 7 March the astute observer of conditions has to bear several shocks. Compored with the figures mentiohed obove, those relating to TV programmes made specifically for children seam insignificant, to say the least.

Thus, for instance, the Sunday ohlldren'a programme Die Sendung mit der Maus (Tha Show with the Mouse) al- have suppressed their feeling of oban-

decision would obviously have had to be in favour of the integration model.

But if, on the other hand, it was assumad that the foreign workers would spend no more than a few years in this country, it would be unwise to burden the children with the German school system since the training they receive. there would not be recognised in their. home countries.

The political argument at the time went as follows: The Federal Republic of Germany is not an Immigration country and as u result there is no need for educational integration.

The Federal Government's attitude in this connection was summed up in a statement issued on 31 January 1972, according to which "The average stay of foreign workers in this country has increased in length recently, but this has no effect on the present rate of fluctua-

"This high degree of mobility on the part of foreign workers has beneficial to our economy as a whole."

"This voluntary mobility is not at, odds with integration. Even in case of a relatively short stay it should be striven for to integrate foreign workers in the society and economy of our country for the duration of their stay."

This is the reason given for the integration of foreign children in the German school system. But how is this to he achieved?

More than 20, model experiments and research projects had been introduced by the Federation-States Commission by the end of 1976. Two of these models can be singled out as the most successful. Model I is to be found in sll Federal States, with Northrine-Westphalia, Bavana and, shortly, Baden-Württemberg supplementing it by Model 11 as well.

In Model I, all foreign children attend regular German schools following a one to two-year transitional phase. The mo-

ther language is taught outside the curri-culum of the regular school, and children are given time off from school to attend such closses.

This language instruction is not subject to German supervision, but to that of the school suthorities of the children's home countries.

In Model It, children who cannot follow instruction in German are grouped in special classes as soon as there are at least 25 children with the same mother longue available. Eight hours a week are set aside for German lessons.

In subjects where understanding the Genman language is not of paramount importance these foreign children sre taught together with their Gennan counterparts. If the parents so wish, the children can subsequently transfer to regular German schooling.

Model 11 has proved particularly advantageous to all concerned, namely children, teachers and parents. As the Federal Ministry for Education and Science put it: "Physical and psychological stress is avoided by teaching in the mother tongue. The mother tongue is a compulsory compulsory subject and has Its firm place in the regular curriculum. The host country language is taught as a foreign language."

Polls among parents and children attending such classes showed that all concerned were satisfied with this arrangement. But this is no reason for the Conn Government to ba satisfied, since the creation of such "ghetto classes" is exactly what the Government did not

The German Trade Union Federation (DGB) had this to say on the subject in a comment of 1 June 1973; "The DGB emphatically rejects all types of consular and national schools. It is not conducive the social integration of foreign workers to have their children taught --isolated from the German youth - according to educational principles of their home countries which so greatly differ from our own."

The educational practice to date has clearly shown that these children are caught between two worlds. Will they weather the situation unscathed?

Peter Brinckmann

(Die Welt, 29 April 1977)

donment by the family and who suffer severe psychological traumas when confronted with similar aituations on television.

Since children learn from living examples, they naturally emulate TV heroes, which can lead to severa aggression or withdrawal into passivity.

Allhough these facts are in no way new and although experts keep stressing the dangers of uncontrolled TV viewing by children and atthough even the Federal Centre for Health Information has published television advice for parents, millions of parents completely ignore their children's altitude towards that medlum

Eleven-day course in Russian at Hanover TU

Tubelievable though it might sound, Professor Siggfried Halbauer of the lanover Technicat University teaches scientists and engineers technical Russian in cleven-day crash courses.

Although this does not enable his students to buy a theatre ticket in Russian, they can cope with any technical or mathematical problem in that lan-

The purpose of the courses is to enable its participants to read or even translate specialised Russian literature.

The Halbauer method has been used since 1968 and has meanwhile been adopted by major industrial corporations. In fact, the Russians themselves recommend this method.

The whole thing began in a Soviet POW camp. Halbauer, who wanted to become a journalist, delived deeply into the Russian language and began to seek ways and means of learning it by jettlsoning superfluous verbiage and gram-

This is the very system he now employs in the five specialised fields of his method --- generat natural sciences. technulogy, mathematics, chemistry and transformer technology. Using a computer, he established the most frequently used and most important specialised terminology.

Of the 21,000 words which Professor labaner culled from books and magazines and fed into a computer, the electronie brain filtered out 200 constantly recurring terms for each discipline of science.

And only these 200 terms need bo memorised by his students. Says Professor Hatbauer: "The more specialised a field, tha fewar the terms that have to be remembered."

In concrete terms, this mesns that turbine technologists can master 67 per cent of the terminology used in that field by memorising 215 words, plua 15 per cent of foreign language terms, which makes a total of 82 per cent of that field's terminology.

The Halbauer mathod is known throughout the world, and the Professor receives enquines from as far away os Thailand, wanting to know how his method can be adapted to the Thsi tan-

But of course Professor, lisibauer's linguistic research goes much further. At present he is engaged in statistics dealing with the length of words, although he keeps reverting time and ogain to inte crash course.

Says he: "My method would also chable a student of Latin to poss on examination in eleven days." And indeed Caesar's Gallio Wars is essentially written in specialised martial terminology which would pose no probeim for the computer and could be taught along the lines of Professor Halbouer's tried ond oven method

Such technical Russian is obviously inadequate when it comes to ordering a meat in a restauront or carrying on a convarsation.

Even newspapers do not becomo more easy to read, since the necessity of using a dictionary all the time spoils even the last bit of pleasure such an endeavour might hold.

But the time-saving is enormous, and as a result Professor Halbatter has more students than he can handle. Inthis west

Green plan for Reeperbahn makes bar-owners see red

The local papers were delighted to her that Hamburg's notorious Resperbalm is to become a tree-lined avenue with a central reservation full of

Hamburger Morgenpost, for instance, was fullsome in its praise of the 9.4-hill lion-deutschunurk projoct, delails of which had just been released by the city muthoritles:

The owner of a St Paull striptease club was far from overloyod. He is worrled lest the frees overshadow his neon lighting and prove to have an adverse: effect on business.

"Besides", one Recperbahn habilué pointed out, "nearly ull the St Paull prostilules are dog-owners and now they will solicit custom as they take their dogs for a walk beneath the lrees."

The Resperbahn has certainly been a sorry sight for the past three and a half yenrs, pitted with road works as an underground rallway is dug from one end of SI Paull to the other.

It is not certain to be tranaformed Into a tree-lined avenue over the next year or lwo, however. A substantial number of bar-owners are planning a protest campaign. What the Reeperbahn badly needs, they say, is more parking facililles for visitors.

Views about SI Pauli have always differed in Hamburg. The Hamburgers have mixed feelings about the Reeperbahn even though it accounts for 200 million deutschmarks in business st a cautions estimate every year.

Local people would not, for the most part, dream of going for a walk along the Reeperbahn or the Grosse Freiheit, home of countless striptease clubs and, for many years, the Slar Club, where the Beatles worked for a while before they really made a name for themselves in the early sixties.

They would certainly not deign to visit a aimptease show or look at o blue film. St Pauli, most local folk feel, is strictly for the lounsta.

But when friends and relations come for a visit they are invariably escorted to Hamburg's "sinful mile" for an evening out. Oddly enough, they are then proud to be able to say that St Pauli is in Hamburg

Local politics where the Reeperbahn is concerned are also governed by this irreconcilable contradiction between the

24-

senliment that St Pauli is a disgrace and the covert feeling of pride that the Reeperbahn is one of the sights of the city. Until the late alxties the official altitudo was one of cinbarrassment. The Reeperbalin might not go away but the

authorities chose, on the whole, to lgnore il. Only Kurt Falck of the borough licensing authority, dubbed the "Iron

Broom of St Pauli," dld anything about the ailuation. Now and again Herr Falck embarked on headline-hitting campaigns to clean up the area. Kurt Falck may have done his best to

fight crime, violence and prostitution, but by 1970 St Paull was ao nife with crime that small-town visitors preferred to steer clear of the area, patronising striptease clubs in the countryside instead.

After a visit to Hamburg ian Naim wrote in the Sunday Times that the Ree³ perbalut was vastly overrated. "St Pau-II." he told British readers, "Is a bogus factule creeted solely for the purpose of conning visitors."

He was not far wrong, and the nutlioritics finally began to sit up, and take notice, wortied lest the plummeting reputation of St Pauli might rebound on that of Hamburg itself."

In the carly seventles a concerted effort was undertaken to clean up the Reeperbahn and vicinity. Local parents called for an end to streetwalking during the daytime so that their children could go to and from school unmolested.

Since 18,000 people live in the vicinity the parents had a point. The authorltles banned prostilules from walking the atreets except in a clearly defined area between eight at night and six In the moming.

Police raids on disreputable bars were stepped up. So were regular patrols. A number of brothels were shut down. Calering staff with a criminal record were banned from setting foot in St Pauli bars. Even the porters whose job it is to entice passera-by to step inside for a quick look at the floor show ("No obligation, mind, but it's hot stuff, I assure you") began to find life more difficult.

They used almost to drag people indoors but those days are over. In 1972, for instance, hefty fines were imposed in 210 cases for moleating the general public. The Reeperbahn,

pessimlsts warned, is going to dle Its death of boredom, But gloomy forecasts of this kind have yet to be provcd accurate. A stroll round St Pauli can still be an expensive evening out. Chief Inspector Borchert of the Davidswache, the local police, atation, adviaes visitors not to overdo their drinking, not to take more money with them . than . they intend spend-

ing and not to venture alone into the aleazier bars.

Take along plenty of small change and leave those high-denomination notes at home; he says. Steer clear of unsolicited friends in bars and clubs and don'l, whatever you do, heap abuse on the prostitutes that line a number of streets.

Before you know what has hit you you misy find yourself being mugged by their pimps, Inspector Borchert warna. Dieter Stäcker (llannoversche Allgemeine, 30 April 1977)

SPORT 1997 - 1997 - 19 Biological aids take over in the race for sporting prowess

Prominent scientists reckon we are in a process of transition from the chemical to the biological age in respect of allen influences. that ican be brought to bear on the human frame.

Take, for instance, sport in the seventies, with competiting social systems vying to demonstrate their superior prowess in dozens of disciplines.

For the general public the news that the Soviet Union has finally overtaken the United States in the race for Olympic medals is no less exclting than the race to the Moon.

Both sides sparo no expense, resorting lo any method available to be first past the post, and neither of the superpowers dre averse to manipulation of the nthlete's mind and body.

Bornber pilots in World War II may have been plied with amphetanines to keen fatigue at bay or with pervitin to create a feeling of cuphona, but drugs of this kind went out with the Ark, pundits ėlaim.

Doning in This rlassic manuer Is old hat. Chemical warfare has now been superseded by biological warfare in topflight competitive sport.

Weight-lifter Rolf Milser, for instance, underwent blood, transfusions to ensure peak performance, while this country a swimmers at Montreal had their Insides pumped full of alr to make them lighter in the water and enable them to gain a surreptitious advantage over the others.

But the most widespread, form of doping in this day and age is the use of anabolic steroids, or muscle-building hormones, despite the fact that endocrinologists unanimously agree they are harmful.

Yet ambitious specialists in sports medicine continually try to convey the Impression that it is a storm in a teacup. Herbert Reindell, president of the Federal Republic Courieil of Sports Medicine, has dubbed team doctors of this kind "performance physiologists pure and simple."

Dr Reindell, the Fraiburg specialist, doubtless has in mind men like Professor Josef Keul who prescribe muscle pills for athletes yet are also members of commissions set up to combat doping.

The doctor who goes furthes] in this. approach is probably the Cologne physiologist Alois Mader, who defected from the Halle In the GDR a few years ago with all manner of prescriptions such as the berolase jab.

Dr Msder marshala Marxist verbiage to decry the purists, calling for an end to the labooa that surround the use of steroids.

It is unfuir, he claims, to allow a romising young athlete to beaver away for years at a punishing training schedule, but to bar him or her from taking muscle pills which are harmless provided only they are taken in small doses. and under medical supervision.

Dr Mader surely reaches the height of cynlcism with the following argument. In the past, he maintains, women with the highest androgen count among their hormones were bound to monopolise the shot-put medals.

Relentless training and limbs of the right length were not enough, since women with a lower androgen count were unable to develop such bulging muscles.

Thus, Dr Mader blandly argues, anabolic sterolds assure all women athletes of a fair crack of the whip. If they take their steroids as instructed there is no limit to the muscle they can develop.

Al some stage of the proceedings the sense of justice or fair play seems to have gone haywire. Athletes, coaches and medics invariably point accusing fingers at the unsavoury practices of the others, who leave them with little option but to follow suit.

No one would dream of advocating the rehabilitation of a 400-metre runner.

Continued from page 14

head - a aight the city had not seen? since Kaiser Wilhelm II's silver wedding. A miniature railway tours the park, but pedestrians can also walk along paths and over eye-catching bridges, feasting their eyes on flowers of all kinds, cspecially roses (100,000 of them in 250 different varicties).

There are plonty of attractiona for the children too: a playhouse and children's workshop, a play street and an open-air theatre for aix- to thirteen-year-olds.

The largest floral hall, clad in plastic foil, is the size of a cathedral. The show has an international flavour too, with gardeners and florists from all over Europe 'exhibiting.

The Horticultural Association's pavilion is an architectural scnsation. It ia made of fibreglass-reinforced concrete only one centimetre thick even though a 33-metre (108ft) arch is ananned.

... The building material is the result of a research project conducted at Stuttgart University department of atructural engincering.

for instance, who cut a corner to gain an unfair advantage. Yet no one secure to care two hoots

about the ban on anabollo steroids which forma part of the Olympic statutea and the rules and regulations of most associationa and federations? Not long ago Munich shot-put spccialist Eva Wilms was in the news as a victim of anabolic steroids. She not only has the appropriate stature and build; experienced endocrinologista claim that her voice has already undergone irrevers-

Ible, unmistakcable changes. The spotlight of public opinion has now focussed on Annegret Richter, the Dortmund girl who who the 100 metrea gold medal at Montreal.

Willi Daume, president of the Natiohal Olympic Committee, did her a diaservice by offering her the services of his lawyer and applying for Injunctions ugainst people who dared to suggest that she too mny have resorted to prohibited

Manfred Ommer, an athlete who owes his own sliver medal at the European championships to the use of anabolic steroids, has taken up the challenge and Intends to prove that Annegret Richter is a fellow-offender.

Even Willi Daume himself, the Dortmund iron and steel manufacturer who brought the 1972 Olympics to Muuich, now seems to have been tarred with the same brush.

Herr Daume may repeatedly talk in terms of the humanisation of top-flight sport, but he invariably backs the specialists in sports medicine to the hilt.

Yet Willi Daume was certainly in the know about the controversial injection which allegedly robbed Hamburg's Peter-Michael Kolbe of Olympic gold in the single sculls at Montreal. He must

Ten fountains are fed by local springs. The Baden-Württemberg state psvillon features a programme ranging from puppet theatre to political platform debates.

The new planetarium, computerised, features 8,992 stars in a faithful reproduction of the night sky screened hy 150 projectors.

More than 300 bands and theatre companies employing 15,000 people or so and hailing from all manner of countries have been hired during the summer scason.

The highlights of the show will the country dancing days (28 to 31 July), the rose festival (15 to 17 July) and the three long nights, dedicated to Baden-Württemberg (18 June), Greecc (6 August) and Brazil (13 August).

The show will also feature local delicacies and specialities, especially wine, and visitors can take a seat on the terraces and rest their aching feet while they watch the Badon-Württemberg version of a rodeo. Fridtiof Theegarten

also have known about the air pumped into the swimmers.

Sport in this country has come to resemble the sorcerer's apprentice in that things have got out of control. The time has come for legislation against doping, as in France and Belgium.

It is an unsatisfactory state of affairs, to say the least, when the senior forensic scientist in charge of doping tests, Dr Donicke, happens to be a subordinate of Professor Kirsch, head of the board of governors of the Federal Sports Science Institute and president of the Amateur Athletics Association.

Why? Because, according to hammerthrower Edwin Klein, 95 per cent of the AAA's top-flight athletes take the muse-Manfred Steffny e pill.
